

Module 8: Programming Assignment 8

[Start Assignment](#)

- Due No Due Date
- Points 100
- Submitting a file upload
- File Types h and cpp

Programming Assignment

Building on the stacks you implemented earlier (which includes the eight user menu options), add exceptions to the stack class. You should have at least two exceptions: Underflow (popping an empty stack) and Overflow (pushing onto a full stack). Your exceptions should pass along the identity of the stack that caused the exception.

Submit the following three source code files as attachments to the drop box for this module's programming assignment: `Stack_driver.cpp`, `dblstk.cpp`, `dblstk.h`. You can find the drop box at the end of this module's tab page. Do not compress your attachments. Please review the requirements for submitting on the course syllabus.
