Module 11

Linked List Example

Congratulations, you made it! This is the final module. Module 11 is a large example that rolls together just about everything we've learned in the course. Here we see an implementation of linked lists that is extremely general purpose. A linked list is a data structure that allows us to easily manage a lot of data, especially in situations where we don't get all the data at once, but acquire it at different times. Space for each data item is only allocated when we need it.

Once you have gained an understanding of this example, you've pretty well mastered the C++ core language. You're ready to prepare for the final exam!

Goodbye & Good luck

I hope that you have enjoyed the course and found it to be a good learning experience. Now that you're nearing completion of this course, you may be wondering where to go from here. There are several courses you are now prepared to take. If you're interested in learning to develop applications on the PC, you'll

probably want to take a course in the Microsoft Foundation Classes. You're also ready for a course in object-oriented design. If you are interested in programming for the Web, learning Java will be fairly easy now that you have a good background in C++.

[Final Assessment](#)

Course Evaluation

Please share your feedback on the course and online learning experience. [More information and the course evaluation can be found here.](#)
(<https://onlinelearning.berkeley.edu/courses/2291660/pages/course-evaluation>)

Learning Objectives

- A large example that uses essentially everything students have learned

Lectures

Presentation

- [11.1: Linked Lists](#)
(<https://onlinelearning.berkeley.edu/courses/2291660/pages/topic-11-dot-1>)

Reading

The reading for this Module is C review. Depending on your C background, you may be able to move through this material quickly.

Required Readings

- *C++ Primer Plus*, Chapter 12 - A Queue Simulation

Discussion

Module 11 Discussion

(https://onlinelearning.berkeley.edu/courses/2291660/discussion_topics/14351900)

Assignment

Module 11: Short Answer 11

(<https://onlinelearning.berkeley.edu/courses/2291660/assignments/33623134>)

Module 11: Programming Assignment 11

(<https://onlinelearning.berkeley.edu/courses/2291660/assignments/33623132>)

Source Code

In each module of this course, you will be required to submit a programming assignment. For each module, I have prepared sample source code for your reference. Please take a few minutes to download and install all of these

programming examples. The files have been compressed into one zip. You will need a zip utility to decompress the file.

Final Assessment Reminder

There is a comprehensive final assessment which will be delivered online.

- This assessment must be completed by your course end date, which is 180 days from your course enrollment date. The Welcome email that you received lists your official course end date.
- To be eligible for the assessment, you must have been enrolled in the course for at least 60 days and have completed and received a grade for all assignments.
- In order to pass this course, you must pass the final assessment with a grade of 70% or higher.

Message your instructor via the course inbox when you have completed all course assignments and are ready to complete the final assessment.
