

Module 9: Programming Assignment 9

[Start Assignment](#)

- Due No Due Date
- Points 100
- Submitting a file upload
- File Types h and cpp

Programming Assignment

Building on the stacks you implemented in Programming Assignment 4, write a generic stack package using templates, so that a user of your package can create stacks of the integer data type.

The program should still provide all eight user menu options identified in Programming Assignment 4 as well as allowing the user to select the menu options and push user entered values to stack 1.

Submit your two source code files (stackdriver.cpp and dblstk.h) as attachments to the drop box for this module's programming assignment. You can find the drop box at the end of this module's tab page. Do not compress your attachments. Please review the requirements for submitting on the course syllabus.
