

Module 5: Short Answer 5

[Start Assignment](#)

- Due No Due Date
- Points 100
- Submitting a file upload
- File Types docx, doc, rft, and, and txt

Short Answer Questions

1. Why don't conversion operators such as `operator float()` have return type specified?
2. We have talked about performing conversions in situations where you might not control the source code. In practice, do you think this is really a problem?
3. If you really wanted to prevent client software from performing certain conversions, can you prevent them from happening?
4. Why might the availability of automatic conversions be a problem?
5. Why is it usually better to pass objects by reference than by value?
